

How do we engage with sustainable development in our own work?

A less unequal world seems to be an essential aspect of sustainable development. For example, greater equality in access to resources will allow the whole society to access resources in an environmentally friendly way. A more equal society today will also create a more equal world tomorrow, with real equality of opportunity for new generations and less social tension.

The path to such a situation is of course a long one, and we are seeking to understand in our research how public policies can reduce poverty, redistribute efficiently resources and promote gender equality.

Minimum income, indirect taxation, in kind transfers and parental leave policies are therefore at the heart of our concerns.
